ARPONING THIS Sequence 1s unitained and does not necessarily represent the correct sequence. Work on the sequence is in progress and the release of this data is based on the understanding that the sequence may change as work continues. The sequence may be econtaminated with foreign sequence. Ecoli, yeast, vector, phage etc. Order of segments is not known; 800 n's separate sequence. By continuins a sequence: bkill9182 Contig_ID: 01507 acc_ Length: 2099 bp Unfinished sequence: bkill9182 Contig_ID: 01607 acc_ Length: 5280 bp Unfinished sequence: bkill9182 Contig_ID: 01201 acc_ Length: 1183 bp Unfinished sequence: bkill9182 Contig_ID: 01500 acc_ Length: 1183 bp Unfinished sequence: bkill9182 Contig_ID: 00949 acc_ Length: 6912 bp Unfinished sequence: bkill9182 Contig_ID: 00949 acc_ Length: 6912 bp Unfinished sequence: bkill9182 Contig_ID: 00949 acc_ Length: 6912 bp Unfinished sequence: bkill9182 Contig_ID: 00949 acc_ Length: 6912 bp Unfinished sequence: bkill9182 Contig_ID: 00949 acc_ Length: 6912 bp Unfinished sequence: bkill9182 Contig_ID: 00946 acc_ Length: 2136 bp Unfinished sequence: bkill9182 Contig_ID: 00946 acc_ Length: 2136 bp Unfinished sequence: bkill9182 Contig_ID: 01825 acc_ Length: 5412 bp Unfinished sequence: bkill9182 Contig_ID: 01823 acc_ Length: 542 bp Unfinished sequence: bkill9182 Contig_ID: 01831 acc_ Length: 542 bp Unfinished sequence: bkill9182 Contig_ID: 01825 acc_ Length: 12009 bp Unfinished sequence: bkill9182 Contig_ID: 01829 acc_ Length: 12009 bp Unfinished sequence: bkill9182 Contig_ID: 01825 acc_ Length: 12009 bp Unfinished sequence: bkill9182 Contig_ID: 01825 acc_ Length: 12009 bp Unfinished sequence: bkill9182 Contig_ID: 01832 acc_ Length: 1799 buffinished sequence: bkill9182 Contig_ID: 01832 acc_ Length: 1799 buffinished sequence: bkill9182 Contig_ID: 00050 acc_ Length: 1751 bp Unfinished sequence: bkill9182 Contig_ID: 00050 acc_ Length: 1751 bp Unfinished sequence: bkill9182 Contig_ID: 00050 acc_ Length: 1751 bp Unfinished sequence: bkill9182 Contig_ID: 00050 acc_ Length: 1751 bp Un

IMPORTANT: This sequence is unfinished and does not necessarily represent the correct sequence. Work on the sequence is in progress and the release of this data is based on the understanding that the sequence may change as work continues. The sequence may be sequence may change as work continues. The sequence may be contaminated with foreign sequence from E.coli, yeast, vector, phage etc. Order of segments is not known; 800 ns separate segments. Variance 5.444; scale 1.565 Mean 8.518; Statistics: Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Claim 1: Page 1068; 2245pp; Japanese.

Claim 1: Page 1068; 2245pp; Japanese.

A single-stranded DNA (or its complementary strand or the corresp.

double-stranded DNA) which comprises one of the 7817 "GS" sequences
given in T19001-T26837 and which is able to hybridise to part of
form various human deform 3'-directed cDNA libraries prepared
from various human tissues; synthesis of cDNA was initiated from the
if from various human tissues; synthesis of cDNA was initiated from the
if of man appeared sequence is unique to a particular mRNA species, almost
all the 3'-oriented cDNAs hybridise with specific mRNAs. Each library
is constructed so as to reflect accurately the relative abundance of
different mRNAs in the particular tissue from which it was derived.
The appearance frequency of a given GS in a cDNA library can be
determined (esp. using primers and probes derived from the GS
sequences) as a means of diagnosing abnormal cell function or for
cecognising different cell types.

29 Introducing random point mutations into nucleic acods -
29 Isclosure; p: English.
29 Disclosure; p: English.
29 Single stranded template, annealing a primer, elongation, and point mutations were introduced into the alpha fragment of E.coli beta-galactosidase. The wild type sequence was obtained as a single stranded template and an oligonucleotide was hybridised to it to generate a popn of pax molecules which terminate at all possible nucleotide positions within a specified region. The possible nucleotide positions within a specified region. The reverse transcriptase. Nucleotides are misincorporated by the transcriptase and the molecules are completed to forms that can be transcriptase and the molecules are completed to forms that can be maplified and then expressed in a suitable host-vector system.
20 maplified and then expressed in a suitable host-vector system.
21 The sequence covers all 176 diffit base substitutions, most of which contained and MBP.
21 Secales of MBP.

Oligonucleotide probe MK14 A consists of nucleotides 5-95 of MK14
(Q5135). It hybridized to all spp. of mycobacteria tested, but cross reacted to a few non-mycobacterial spp. The probe may be useful as an initial screen for mycobacterial infection.

Oligiouschedide probe MK14-A consists of nucleotides 5-95 of Oligiouschedide probe MK14-A consists of mycobacteria tested, cross reacted to a few non-mycobacterial spp. The probe may be useful as an initial screen for mycobacterial infection. See also Q51735-45 and Q51747-59.

PT Identifying proteins or peptide(s) which bind a ligand - by screening a recombinant vector library expressing fusion proteins comprising a binding domain and an effector domain proteins comprising a binding domain and an effector domain proteins or peptides. This generate can also be servered as follows: X(NNB) English.

C 470465 is a general DNA sequence used to generate random TSAR (Totally DISCIOSURE) as general can also be represented as follows: X(NNB) English.

C 570465 is a general DNA sequence used to generate same as X) that are not specified further. Other general sequences are shown in 070466-68.

C 670465 is a general content of the sequences are shown in 070466-68.

C 700465 is a reconcatenated heterofunctional proteins or peptides, comprising at least two functional regions - a binding domain with a fiffinity for a ligand and a second effector peptide portion that is comprising at least two functional regions - a binding domain with a fiffinity for a ligand and a second effector peptide portion that is comprising the unpredicted or variant residues; These residues confirmationed confermational regidity to the peptides. The TSARS or comprasis comprising a TSAR binding domain can be used in vivo to confer some degree of conformational rigidity to the specific target or on the colliver a chemically or biologically active moister, eg metal ion, compans, comprising a TSAR binding domain can be used in vivo to confer sell righty and process and partibodies and therefore circumvent the need for complex methods of hybridoma formation or in vivo antibody processes are anally characterised and have designed activity allowing direct and rapid detection in a screening process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                 Generic DNA sequence to generate a random TSAR petide library. TSAR; totally synthetic affinity reagent; synthetic; binding domain; effector domain; concateneated heterofunctional protein; linker; direct; rapid; detection; screening; treatment; generic; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           151 CTCTGTGAAGCCTCCCAGCTCTTTCCAGACCAGGTAGGAGCCGTACCCCATGGCTGAGTA 92

Identifying proteins or peptide(s) which bind a ligand - by
screening a recombinant vector library expressing fusion proteins
comprising a binding domain and an effector domain

CC (7046) is a generic DNA sequence used to generate random TSAR peptide CC This generic formula can be represented as follows: X(TGC)(NNB)10- (TGC)(NNB)4(TGC)Y. X and Y are flanking restriction sites (X is not the same as Y) that are not specified further. This sequences are shown in Q70465-68. Other specific peptides that are cloverleaf in structure. Other generated by these generic sequences are shown in R65150-54. TSARs are concatenated heterofunctional proteins or peptides, comprising at least two functional regions - a binding domain with affinity for a ligand and a second effector peptide portion that is chemically or biologically active. They may further comprise a linker peptide between the 2 domains. CC contains 2 or 4 cysteine residues positioned in, or flanking, the upredicted or variant residues. These residues confer some degree of conformational rigidity to the peptides. The TSARs or compension conformational rigidity to the peptides. The TSARs or compension or margine decine and to deliver a chemically or belonged to reazyme, to the specific target or on the cell. They can also replace the function of macromolecules, eq. monoclonal or polyclonal antibodies and therefore circumvent the need for complex methods of hybridoma for a reason of the result of the residue activity allowing direct and rapid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        identifying proteins or peptide(s) which bind a ligand - by screening a recombinant vector library expressing fusion proteins comprising a binding domain and an effector domain bisclosure; page 35: 25pp; English. Q70468 is a generic DNA sequence used to generate random TSAR (Totally Synthetic Affinity Reagents) peptides. This generic formula can also be represented as follows: X(NNB)11(TGC)(NNB)17(TGC)(NNB)10Y. X and Y are flanking restriction sites (X is not the same as Y) that are not specified further. Other generic sequences are shown in Q70466-68. Other specific peptides generated by these generic sequences are shown in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Generic DNA sequence to generate a random TSAR petide library. TSAR; totally synthetic affinity reagent; synthetic; binding domain; effector domain; concateneated heterofunctional protein; linker; direct; rapid; detection; screening; treatment; generic; ss.

R65151-54. TSARS are concatenated heterofunctional proteins or peptides, comprising at least two functional regions - a binding domain with a filmity for a ligand and a second effector peptide portion that is cementally or biologically active. They may further comprise a linker cementally or biologically active. They may further comprise a linker of peptide between the 2 domains. The oligonucleotides are also designed so that the expressed peptide contains 2 or 4 cysteine residues positioned in, or flanking, the unpredicted or variant residues. These residues confer some degree of conformational rigidity to the peptides. The TSARS or comprising a TSAR binding domain can be used in vivo to deliver a chemically or biologically active molety, e9. metal ion, candiolsotope, peptide, toxin or enzyme, to the specific target or on the coll. They can also replace the function of macromolecules, e9.

Compositional antibodies and therefore circumvent the need composition antibodies and therefore circumvent the need confouncion. The TSARs are easily characterised and have designed activity allowing direct and rapid detection in a screening process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   referring a recombinant vector library expressing fusion proteins recently a recombinant vector library expressing fusion proteins a recombinant vector library expressing fusion proteins a comperition a binding domain and an effector domain proteins by a recombination and an effector domain comperition a planding domain and an effector domain comperition is provided as follows: X(NNB)150. monoclonal or polyclonal antibodies and therefore circumvent the need for complex methods of hybridoma formation or in vivo antibody production. The TSARs are easily characterised and have designed activity allowing direct and rapid detection in a screening process. Sequence 114 BP; 6 A; 12 C; 0 G; 0 T;

Tentifying proteins or peptide(s) which bind a ligand - by screening a recombinant vector library expressing fusion proteins or comprising a binding domain and an effector domain bisclosure; Page 35: 255pp; English.

Disclosure; Page 35: 255pp; English.

O70467 is a generic DNA sequence used to generate random TSAR (Totally Synthetic Affinity Reagents) peptides. This generic formula can also be represented as follows: X(NNB)16(TGC)(NNB)12(NNB)16(TGC)(NNB)11. X and Y are flanking restriction sites (X is not the same as Y) that are contended by these generic sequences are shown in R65151-34. TSARS are concatenated by these generic sequences are shown in R65151-34. TSARS are concatenated beterofunctional proteins or peptides, offinity for a ligand and a second effector peptide portion that is affinity for a ligand and a second effector peptide portion that is chemically or biologically active. They may further comprise a linker peptide between the 2 domains. The oligonucleotides are also designed so that the expressed peptide concains 2 or 4 cysteine residues positioned in, or flanking, the unpredicted or variant residues. These residues concents are also residues are also replace to conformational rigidity to the peptides. The TSARs or comprising a TSAR binding domain can be used in vivo to deliver a chemically or biologically active moiety, eg. metal ior, or also replace the function of macromolecules, eg. monoclonal or polyclonal antibodies and therefore circumvent the need for complex methods of hybridoma formation or in vivo antibody production.

The TSARs are easily characterised and have designed activity allowing direction of macromolecules.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 유
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              S,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Trentifying proteins or peptide(s) which bind a ligand - by accenting a recombinant vector library expressing fusion proteins or comprising a binding domain and an effector domain proteins.

PT comprising a binding domain and an effector domain bischosure; Page 35: 255pp; English.

COMPAGE is a generic DNA Sequence used to generate random TSAR (Totally COMPAGE) and Sequence as follows: x(NNB)11(TCC)(NNB)52(NNB)7(TCC)(NNB)10v. x and Y are flanking restriction sites (X is not the same as Y) that are con specified further. Other generic sequences are shown in 707466-68.

COMPAGE TASARS are concatenated heterofunctional proteins or peptides, other specified that the vector is a binding domain with affailty for a ligand and a second effector peptide portion that is chemically or biologically active. They may further comprise a linker of that the expressed peptide contains 2 or 4 cysteine residues positioned in, or flanking, the unpredicted or variant residues. These residues confer some deegree of conformational rigidity to the peptides. The TSARS or comprising a TSAR binding domain can be used in vivo to deliver a chemically or biologically active molety, eg. metal ion, corrections or peptide towing a TSAR binding domain can be used in vivo to deliver a chemically or biologically active molety, eg. metal ion, corrections or poptide, toxin or enzyme, to the specific target or on the conformation or not macromolecules, eg. metal ion, corrections and polyclonal antibodies and therefore circumvent the need conformation or min vivo antibody correction. The TSARS are easily characterised and have designed activity sequence life BP; 0 A; 2 C; 2 G; 2 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        385 TACGCAGTAGTTGAGTGTGGTCGTGAAGGCCAGCCAGGCCAGGTAGGGGGTAGAGCAGGCG 326

05-APR-1995 (first entry)
Generic DNA sequence to generate a random TSAR petide library.
Generic DNA sequence to fiffinity reagent; synthetic; binding domain;
TSAR; totally synthetic affinity reagent; synthetic; binding domain;
effector domain; concateneated heterofunctional protein; linker;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ò
                                                                                                                                                                                                                                                                                                                                                                                                                                Progressing tustomblinary vector library expressing fusion proteins a comprising a binding domain and an effector domain proteins page 35, 25pp; English.

CO70469 is a generic DNA sequence used to generate random TSAR peptide CTALS sequence used to generate random TSAR peptide CTALS sequence used to generate random TSAR peptide CTALS generic formula can be represented as follows: X(TGC)(NNB)14(TGC)Y. X and Y are flanking restriction CTALS generates peptides that are not specified further. This sequence generates peptides that are cloverleaf in structure. Other corrected by these general sequences are shown in G70465-68. Other specific peptides concatenated by these general sequences are shown in R65150-54. TSARS are concatenated by these general proteins or peptides, comprising at least two functional regions - a binding domain with affinity for a ligand and a second effector peptide portion that is chemically or biologically contains 2 or 4 cysteine residues positioned in, or flanking, the conformational rigidity to the peptides. The TSARS or compsis. Comprising or TAR Dinding domain can be used in vivo to deliver a chemically or biologically active molety, est metal ion, radioisotope, peptide, toxin or a TSAR binding domain can be used in vivo to deliver a chemically or biologically active molety, est metal ion, radioisotope, peptide, toxin or enzyme, to the specific target or on the cell. They can also replace CC and therefore circumvent the need for complex methods of hybridoma complex active and hard and have designed activity allowing direct and rapid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    214 GGGGGCCATGCCCAGTTCAGGGCCAGCTGCCCAGTGTAGAGGCCCAGGGGAACCACAGC 155

05-APR-1995 (first entry)
Generic DNA sequence to generate a random TSAR-9 petide library.
TSAR; totally synthetic affinity reagent; synthetic; binding domain;
effector domain; concateneated heterofunctional protein; linker;
direct; rapid; detection; screening; treatment; generic; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   6 banbanbanbanbanbanbanbanbtgcanbanbanbanbanbanbanbanban

Tidentifying proteins or peptide(s) which bind a ligand - by screening a recombinant vector library expressing fusion proteins by screening a recombinant vector library expressing fusion proteins by screening a recombinant vector library expressing fusion proteins by screening a recombinate band an effector domain bisclosure; Page 35; 255pp; English.

Disclosure; Page 35; 255pp; English.

CO 70466 is a generic DNA sequence used to generate random TSAR (Totally Synthetic Affinity Reasperts) peptides comerate formula can also be represented as follows:XNNB)1(TGC)(NNB)10(TGC)2(NNB)42(NNB)8(TGC)(NNB) CC represented as follows:XNNB)1(TGC)(NNB)10(TGC)2(NNB)42(NNB)8(TGC)(NNB) CC represented as follows:XNNB)1(TGC)(NNB)10(TGC)2(NNB)42(NNB)8(TGC)(NNB) CC represented as follows:XNNB)1(TGC)(NNB)10(TGC)2(NNB)42(NNB)8(TGC)(NNB) CC CO TOPETHOR (INTEL) Sequences are shown in R65151-54. TSARS are concatenated betterofunctional proteins CC are shown in R65151-54. TSARS are concatenated by these generic sequences are shown in R65151-54. TSARS are concatenated by these generic sequences are shown in the chart is chemically or biologically active. They may further comprise a CC linker peptide between the 2 domains. They domain can be used in CC designed so that the expressed peptide contains 2 or 4 cysteine residues confer some degree of conformational rigidity to the peptides. They can also replace the function of macromolecules, eg. The TSARS or compsis. Comprising a TSAR binding domain can comprise or on the cell. They can also replace the function of macromolecules, eg. metal CC monoclonal or polycional antibodies and therefore circumvent the need for complex methods of hybridoma formation or in vivo antibody production. CT he TSARS are easily characterised and have designed activity allowing direct and rapid detection in a screening process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     5 gcnnbnnbnnbnnbnnbnnbnnbnnbnnbtgctgcnnbnnbnnbnnbnnnnnnbn 64
